

PrescriptBiotics™

Discover the Benefits of Soil-Based Organisms

Custom Cultured
Blend of 8 x Soil-Based
Organisms

Suitable for
Vegetarians and
Vegans

Suitable for Daily Use

When you ingest PrescriptBiotics™, you inoculate your gut with friendly, soil-based bacteria. These natural microorganisms help to support the delicate balance of the “good versus bad” bacteria in your gut. Getting this into balance brings a cascade of health benefits, including improved digestion, better nutrient absorption, a robust immune system, and so much more.

PrescriptBiotics™ Bio-Identical SBO Probiotics Consortia™ are:

- » A custom-cultured blend of friendly, naturally occurring, soil-born microorganisms.
- » Cultured in their native ancestral plant matter (a natural prebiotic) and other friendly strains of lactobacillus bacteria.
- » “Exactly or similarly matched” to the same diverse bacterial species found in nature and primitive guts thousands of years ago.
- » Completely chemical, toxin, and GMO-free.
- » Shelf-stable (no need to refrigerate once opened)

Soil-Based Organisms (SBOs): Our Missing Allies

We may not realise it, but our modern guts have strayed from what our ancestors’ guts once were. People have consumed plenty of beneficial soil-born organisms (SBOs) for millennia. These good bugs were found in the earth and harvested with the organic, chemical-free foods eaten daily. But in recent years, it has been discovered that the multitudes of friendly bacteria present within our food supply have virtually disappeared.

Every gut needs substantial amounts of friendly bacteria (a.k.a. probiotics) daily to thrive – and the more diverse the bugs, the better. To avoid problems intrinsically linked to poor gut health, such as mood and behavioural changes, weakened immunity, and chronic diseases, we must take extra steps to replenish these missing soil-born bacteria. But not all probiotics are created equal!

Simple Science:

It is Good Gut Health as Mother Nature Intended

Nourishing your gut with a daily soil-based probiotic is a way of repopulating it with the same species of bacteria found in nature.

The SBOs in PrescriptBiotics™ are entirely undisturbed in their formulation and manufacturing process. They are dormant, intact, and alive when they reach your gut. When you take a capsule with water or juice, they are activated to become living organisms.

Once awakened, PrescriptBiotics™ SBOs do what they do best in nature – survive the harsh digestive tract environment, band together, come to life, and start to multiply.

The pure, natural, and ancient bacteria in PrescriptBiotics™ can effectively help your body to:

- » Better assimilate nutrients
- » Support the production of neurotransmitters
- » Boost the immune system
- » Balance healthy hormone levels
- » Regulate energy levels
- » Regulate appetite
- » And much more

Why Choose a Soil-Based Probiotic?

- » **SBOs are ancient.** These are the same beneficial probiotics our ancestors ate and are what's missing from our modern diets.
- » **SBOs are potent.** Soil-born organisms can support metabolism, gut well-being, and whole-body health at multiple levels. Scientists have only recently begun to explore and prove the complexities of how SBOs strengthen the human gut.
- » **SBOs are well-studied.** They have decades of research behind them, demonstrating their benefits for gut health in people and pets.
- » **SBOs support the whole body.** PrescriptBiotics™ contains a "Bio-identical" SBO Probiotics Consortia™ and is identified by its research-backed ability to sustain the entire body's health. "Bio" means "life," and "identical" means "same," showing once again how symbiotic soil-based organisms are with the naturally friendly flora found in our human guts.

Professor Lee Dexter, a microbiologist who dedicated her life's work to identifying and cataloguing over 600 species of SBOs while working with the USDA, explained in her published works why soil-born organisms have the advantage:

- » Spore probiotics found in soil are a specialised area of bacteria.
- » When spore probiotics, like bacillus, are used together with non-spore forming probiotics, like lactobacillus, they form a group.
- » Symbiotic bacterial groups in nature are called "consortia."
- » Bacteria consortia are communities of microorganisms where each microbe benefits from the activity of the others.
- » Naturally-occurring consortia are stable to transfer and are better able to maintain their functional integrity than a single, isolated species.
- » Naturally-occurring consortia create their protective matrix and grow to reach a beneficial balance between all species in the group

When an SBO consortia in your gut starts to communicate, significant changes happen in your body. SBOs can influence the following:

1. SBOs help block waste formation and break down toxins and waste into smaller, harmless molecules that easily pass through the digestive system.
2. SBOs can produce antimicrobial substances or may block pathogenic organisms from clinging to or puncturing the gut wall.
3. SBOs have potent antioxidant activity and can help to scavenge disease-causing free radicals.
4. Within their fermentation process, SBOs produce beneficial compounds that the body's cells, especially those in the liver and the colon, need for nourishment. SBOs naturally manufacture compounds like vitamins, enzymes, antioxidants, bioactive peptides, polysaccharides, and organic acids to change the gut environment and better communicate with the immune system

When good bacteria take over and an SBO Probiotics Consortia™ begins to do its repair work, the balance tips in your favour. Flushing waste and toxins, overpowering pathogenic bacteria, and neutralising free radicals while simultaneously supplying the body with protective vitamins and antioxidants profoundly affect both short-term and long-term health.

What makes PrescriptBiotics™ so powerful?

The assembly of beneficial bacteria in PrescriptBiotics™ come from a pristine source — Mother Nature — and works collectively to bring our modern guts back to balance.

Taking the right probiotic daily makes it possible to replenish dwindling communities of good bacteria in your gut.

It is important to note that the power of PrescriptBiotics™ can't be assessed using an ambiguous measurement like CFUs, or Colony Forming Units, which are often inaccurately reflected on product packaging and have been proven to have little to do with the efficacy or potency of a probiotic.

Because SBOs unite and rapidly multiply, their effect on each gut will differ. The potential may depend on your gut health and how much repair is needed. The excellent news is that PrescriptBiotics™ will work in harmony with your unique microbiome to deliver a tailored level of support – just for you.
